**Northern Saw-whet Owls:
Indiana's Role in Current Research**
Wednesday, April 21st, 2021 6:30pm via Zoom
Meeting Link: bit.ly/WVAS-Saw-Whets

Once considered non-migratory, the Northern Saw-whet Owl is now colloquially referred to as Indiana's smallest owl as banding efforts began to reveal the migratory behavior of the species and its use of habitat across Indiana in the fall and winter. Join us on Zoom as Helen Nesius and Tabitha Olsen of Purdue University discuss the current understanding of saw-whet owl natural history and the on-going research and banding effort taking place here in Indiana!

Global Big Day Bird Count

Saturday, May 8th, 2021 All day!

Join us in an all day bird count that includes birders from all over the world. Contact Peter Scott at peter.scott@indstate.edu to participate.

The **Cornell** Lab 

GLOBAL BIG DAY

Bird Count

Global Big Day Bird Count
Saturday, May 8th, 2021
All Day

Join us in an all day bird count that includes birders from all over the world. Contact Peter Scott at peter.scott@indstate.edu to participate.

The Cornell Lab  
GLOBAL BIG DAY

May Member Meeting

Annual Spring Picnic at Dobbs Park
Wednesday, May 19th, 2021 at 6:30pm

Join us in the Amphitheater for our Annual Spring Picnic. This will not be a carry-in to share food. We ask that you bring your own food, drink and table service. Social distancing will be observed and masks are recommended.

For more information or to let us know you are coming call 812-877-1095.

Annual Meeting/Banquet

Annual Meeting and Banquet at Mogger's
Wednesday, August 18th, 2021 at 6pm

Join us at Mogger's Restaurant and Pub on the patio at 6pm for social hour with dinner starting at 7pm. Dan Bradley of riverSCAPE will tell us about their projects and the collaboration between riverSCAPE and WVAS in producing a local birding guide. Look for more information in future emails.

Terre Haute's 61st Christmas Bird Count, Dec 20, 2020

By: **Peter Scott** (peter.scott@indstate.edu)

This year's count was held during the Covid-19 "novel coronavirus" world pandemic, ongoing since March. Let's hope this becomes a historical curiosity for future readers, not a recurring event. It did not affect us much on count day, except by limiting field party-sizes to family members and cutting out social gatherings at lunch and dinner. We had a countdown using the Zoom video conference app.

Count total: We had **81** species on the count – the same as last year, and right at our recent average of 81.6 species for the last 10 years. I hasten to add that *our average is high for our location and birder numbers, and reaching it takes hard work each year. So, good job!*

No new species were added to the all-time count-day list of 145, BUT an **Orange-crowned Warbler** busy at Dobbs Park feeders on Dec. 17-18 was a new count-week bird. Sadly for our count's glory, this procrastinator evidently moved south to winter warbler-land, leaving Carissa Lovett's mealworm treats behind. All species seen on count day were ones that have been recorded in the last 10 years (**Table 1**), during which time 114 species have been found. The rarest were **Black Vulture**, **Common Merganser**, **Eastern Phoebe**, and **Brown Thrasher**, each with either 2 records (the vulture) or 3 in the past 10 years.

Table 1. Species seen in 2020 and their frequency in last 10 years (including 2020).

# years seen	# species in category	Species names
10	57	(too many to list)
9	6	Greater White-fronted Goose, Wild Turkey, Pied-billed Grebe, Eurasian Collared-Dove, Hermit Thrush, Cedar Waxwing
8	3	Northern Shoveler, Red-breasted Nuthatch, Purple Finch
7	4	Snow Goose, Rough-legged Hawk, Winter Wren, Eastern Meadowlark
6	4	Common Goldeneye, Ruby-crowned Kinglet, Pine Siskin, Savannah Sparrow
5	3	Ruddy Duck, American Coot, Short-eared Owl
3	3	Common Merganser, Eastern Phoebe, Brown Thrasher
2	1	Black Vulture
Total	81	

Although we saw most of the "regular species" (**Table 1**), we missed four that we have found more often than not (**Table 2**): **Eastern Screech-Owl**, **Peregrine Falcon**, **Common Grackle**, and **Killdeer**.

Table 2. Species seen in at least 4 of the last 10 years that were missed in 2020 (7species).

# years seen	# species in category	Species
9	1	Eastern Screech-Owl
8	2	Peregrine Falcon, Common Grackle
6	1	Killdeer
4	3	Lapland Longspur, Chipping Sparrow, Rusty Blackbird

(Continued on page 5)

(Continued from page 4)

High counts: We established all-time high counts for six species, perhaps aided by a higher than usual number of party-hours (112): Wild Turkey, Bald Eagle, Blue Jay, White-breasted Nuthatch, Carolina Wren, and Ruby-crowned Kinglet.

Participants: **Thirty-three** birders participated, operating in 17 field parties that were active for at least 1 hour (the average being 6.5 hours of daytime birding). Two observers watched a yard feeder. New participants included **Brian Payne** and family, **John Sheldon**, **Mona** and **Rob Sternfeld**. Eighteen participants are veterans of at least 5 Terre Haute counts; ten have done 17 or more, led by Mary Beth Eberwein (36 counts).

Greater White-fronted Geese at fenced lake on Carlisle x Dallas Roads (Michael Brown)

Weather: Temperatures ranged from 35 to 43 F. It was cloudy early and clear from midday on. Winds were light in the morning, reaching 14 mph in the afternoon. There was no snow cover or precipitation, and rivers and lakes were unfrozen. In short, conditions were pleasant for winter.

Waterfowl: The usual three goose species – Greater White-fronted, Snow, and Canada – were present in unremarkable numbers. No swans were found within the circle, though the lakes of nearby Universal mine are full of Trumpeters and Tundras.

We had 9 duck species: in descending order of abundance, they were **Mallard (263)**, **Gadwall (87)**, **Northern Shoveler**, **Ring-necked**, **Hooded Merganser (12)**, **American Black**, **Ruddy (2)**, **Common Goldeneye (1)**, and **Common Merganser (1)**. The best sites were Hulman Street reservoir (with Black Duck and divers) and J.I. Case Wetland by Hawthorn Park (Gadwall, Shoveler). The juvenile Common Merganser in female plumage was the best duck rarity, found by Marty

Common Merganser (Marty Jones)

(Continued on page 6)

(Continued from page 5)

Jones on Otter Creek at Forest Park, just above Mill Dam.

Gallinaceous birds: Our count of **Wild Turkeys (133)** was an all-time high, though we have broken 100 several times. There were 3 big flocks of 35-47 birds.

Grebe, Heron: Eight **Pied-billed Grebes** lingered, half of them at Hulman Lake. **Great Blue Herons (25)** were fairly common.

Vulture, Hawks and Eagle: The count of **Turkey Vultures (123)** was the second highest ever, following last year's record of 159. The biggest group was 45 west of St. Mary's, by Nicole Castaneda and Meredith Hoggatt. Two **Black Vultures** were our second CBC record for the species, still irregular in the county. The **Bald Eagle** count of 16 was an all-time high, with 1 to 3 birds seen by 7 parties.

Red-shouldered and Red-tailed Hawks were equally common (42 each). Two **Rough-legged Hawks** were seen in the northern part of the circle, a species often missed. **Northern Harrier (7)**, **Cooper's Hawk (9)**, and **Sharp-shinned Hawk (1)** rounded out the list, the last of these being a late afternoon find.

Coot, Shorebirds, Gull: Three **American Coots** hung on at JI Case wetland. We found no Killdeer or Snipe. **Ring-billed Gulls** made appearances along the Wabash River (flocks of 30 and 40), but did not repeat their remarkable abundance of last year at Hulman Street Reservoir.

Pigeons and Doves: 40 **Eurasian Collared-Doves** were counted on the railroad tracks at Graham Grain, enjoying spilled corn. **Rock Pigeons** and **Mourning Doves** were common.

2 Black and 1 Turkey Vulture
(Steve Lima)

A Barred Owl hunted in mid-morning along Springhill Road (Peter Scott)

Owls: Steve Lima and Ben Cvengros each had a **Great Horned Owl**. Steve had a **Short-eared Owl** in one of the grassy units of Wabashiki FWA along Darwin Road, a species seen in only 5 of the last 10 years. We had nine **Barred Owls**, including one that flew into the open at 9:30 am to pose for Peter along Springhill Avenue. A major disappointment was missing **Eastern Screech-Owl**, despite 3 hours' effort at previously dependable sites. For some mysterious reason, Screech has become hard to get, though we've had it on 24 of 26 counts since 1996 and counted 10 as recently as 2014. More field work is needed. The behavior of smaller land birds indicates that they still consider it a threat. On the Wabashiki levee trail, Tufted Titmice hearing the recording in late morning flew to suspicious tree cavities to inspect.

Woodpeckers: We found the usual 7 species, including 10 **Yellow-bellied Sapsuckers**. We had 47 **Red-headed Woodpeckers**, the most since 2003; Marty had 11 in Forest Park on Otter Creek, and the Bakkens had the same total. 33 **Pileated Woodpeckers** tied the record.

Falcons: 22 **American Kestrels** were seen, but **Peregrine Falcon** was missed. Usually (since 2002) 1 or 2 are present downtown or on the ISU campus. But even Steve Lima, who knows their every perch, could not find one. A pair nested successfully again this year on the Sycamore Building, so the absence (if indeed all left town) will likely be

(Continued on page 7)

(Continued from page 6)
temporary.

Flycatcher: An **Eastern Phoebe** spent count week sallying for insects at a small pond, protected from wind, at Bill Mitchell and Denise Sobieski's property. This is one of the hoped-for, potential late-lingering insectivores, but we've only had it on 5 previous counts over 60 years – so a great find.

Jay to Kinglet: The count of **486 Blue Jays** was an all-time high; the acorn crop has been good in some areas. No special effort was made to count **American Crows** at downtown roosts at dawn or dusk. During the day, several parties reported 300-750 birds each. The total of **4,532** was certainly an under-count for the circle's nocturnal population, but still it was our most numerous species.

Forty-six **Horned Larks** were found (40 by Dick Bonness and Dan Weber), a typical count for a non-snowy day. Numbers for **Carolina Chickadee (217)** and **Tufted Titmouse (197)** were normal, while **White-breasted Nuthatches** set a record with **112**. Six **Red-breasted Nuthatches** were tallied, the remnants of a good fall incursion. We had 1 **Winter Wren** and **137 Carolina Wrens**, the latter an all-time high. Five individuals were seen of each kinglet species, **Golden-crowned** and **Ruby-crowned**, an all-time high for Ruby-crowned. One visited the productive water leak in the Root Hall (ISU) meditation garden and was photographed by Marty Jones.

Thrushes to Warblers: **Eastern Bluebirds (155)** were seen by almost every party, and **American Robins (354)** were even more common. The largest robin flock was at the Root Hall watering hole, admired by Mary Beth Eberwein and Paul Wassel. Nick Gabry heard a **Hermit Thrush** sing (a rare winter occurrence) at Saint Mary-of-the-Woods; 6 others were detected.

Sixteen **Northern Mockingbirds** were scattered across the circle. Steve Lima found a pair of **Brown Thrashers**. **European Starlings (2157)** were half as common as **American Crows**. It was a single-digit year for both **Cedar Waxwing (3)** and **Yellow-rumped Warbler (3)**. As noted in the introduction, an **Orange-crowned Warbler** spent 2 days at Dobbs Park feeders before vanishing on count day. It is still a great count-week bird. Carissa Lovett quickly recognized it, since another Orange-crowned spent time there late last winter (Jan 21-March 7,

Ruby-crowned Kinglet at ISU (Marty Jones)

Brown Thrasher (Steve Lima)

**Orange-crowned Warbler, Dobbs Park
(Peter Scott, Dec. 17)**

(Continued on page 8)

(Continued from page 7)
2020).

Sparrows, Cardinal, Blackbirds, Finches, House Sparrow: We had 10 sparrow species, counting **Eastern Towhee**, including 9 **Savannah Sparrows** (all at the former Key West Mine, a grassy unit of Wabashiki FWA) and 3 **Fox Sparrows**. The three most common species – **Dark-eyed Junco, White-throated Sparrow, Song Sparrow** – were seen by almost all parties. The others, in descending order, were **American Tree (57), White-crowned (39), Field (15),** and **Swamp Sparrow (8)**.

A dapper young White-crowned Sparrow (Michael Brown)

Unusual plumage of a female Cardinal (David Bakken)

Northern Cardinals were widespread (**402**). One in the Bakkens' yard was most unusual-looking: *an adult female with a pinkish white head and wing coverts, qualifying as partially leucistic.*

The only large "blackbird" flock was one of 500 **Brown-headed Cowbirds** (Bakkens). One hundred fifty-one **Red-winged Blackbirds** were counted, but **Common Grackle** and **Rusty Blackbird** were missed. Most of the 15 **Eastern Meadowlarks** were in grassy units of Wabashiki FWA.

House Finches and **American Goldfinches** were seen by most parties, and 2 **Purple Finches** by Steve. It's been a good fall and winter for **Pine Siskins** across Indiana and we had 19, including 15 at the magnetic feeders of Mitchell/Sobieski, which in November had 3 *White-winged Crossbills*. Alas, no *Evening Grosbeaks* were located, though this is the best winter for them in the lower Midwest in over 20 years, with records in more than 15 Indiana counties.

House Sparrows (599) are not yet a declining "species of concern" in Indiana, as they are in Europe.

On the following page, count totals are given for this year's count. See also a separate Excel spreadsheet that I will circulate, which has party-by-party totals for 2020 and the 1960-2020 history. Results will also be posted on the National Audubon Society's Christmas Bird Count web page.

Thanks: to Dan Weber for compiler assistance, Steve Lima for weather data, and David Bakken, Mike Brown, Ben Cvangros, Marty Jones, and Steve Lima for sharing photos from count day.

Bird Town Indiana

WAVS has played a vital role in conservation projects around the Wabash Valley for more than half a century. In 2021, WAVS received recognition for their efforts by earning the 'Bird Town Indiana' designation for the city of Terre Haute.

This designation is a source of pride showing that our community is actively committed to protecting and conserving our natural world and local bird populations.

Wabash Valley Audubon Society Volunteer Opportunities

Volunteering is fun and not just for the members of the board! There are many easy ways you can help the organization. Here are a few:

Hospitality

Sign up to bring a snack to one of the monthly meetings. This does not have to be homemade, you can just pick something up from the store.

Dates for 2021: To prevent the spread of Covid-19, there will be no food or drink sharing.

Birding with Wabash Valley Audubon at Dobbs Park Nature Center

WVAS is providing public educational programs. Volunteer to help out at one of these programs as many have a craft component. Or volunteer to lead one of the hikes or presentations. For a list of the future program topics go to our Facebook page or email us.

Outreach

WVAS attends many educational events. We man a table and pass out information about WVAS and wildlife. Look for opportunities to help throughout this and upcoming newsletters.

Board Meetings

You are welcome to sit in on board meetings, which is a great way to find out more about the organization and ways to help out.

Dates for 2021:	Apr. 21st	May 19th	Sep. 22nd
	Oct. 20th	Nov. 17th	Dec 15th

To help out with any of the above or if you have questions, please feel free to contact Carissa Lovett at 812-877-1095 or carissa.lovett@terrehaute.in.gov.

We hope to hear from you soon.

Membership Reminder

**September started the new fiscal year for WVAS,
so please remember to renew your membership.**

We would like to see photos from our members. Here are some ideas, but you are not limited to this list.

- ◇ Take pictures while birding, hiking, or at our meetings
- ◇ Do you have an interesting bird visiting your feeders?
- ◇ Have you seen an animal you cannot identify?
- ◇ Do you have a nice picture of a weather event?
- ◇ Have you seen a cool reptile or amphibian?
- ◇ Take pictures of butterflies, trees, flowers, the sky is not the limit.
- ◇ We would like to include photos of our members enjoying the outdoors.

Luna Moth by Carissa Lovett

Audubon

The Wabash Valley Audubon Society
is a Chapter of National Audubon Society, Inc.

The Wabash Valley Audubon Society (WVAS) serves Clay, Parke, Sullivan, Vermillion and Vigo counties. The public is welcome to attend our activities, including monthly meetings, field trips and conservation projects.

WVAS Mission

WVAS is involved in appropriate projects to conserve and restore natural ecosystems, interact with other local organizations and groups with similar concerns, and provide educational opportunities to the local community to increase their awareness, appreciation, and involvement in the natural world that surrounds them.

Statement on Equity, Diversity, and Inclusion

The Wabash Valley Audubon Society believes our education and conservation work is enriched and strengthened by the contributions of diverse individuals and communities. We believe the WVAS must reflect and embrace the diversity of human experience in our communities, workforce, and membership in order to achieve our conservation goals in a way that represents all.

We are committed to creating a culture of acceptance and inclusion that values and supports the diverse voices of our members, including those influenced by sex, ethnicity, race, sexual orientation, age, religion, gender identity and expression, disability, national or ethnic origin, politics, and personal experience. It is our aim to foster an environment free of discrimination that is dedicated to promoting diversity, equity, and inclusion through proactive efforts to advance equality in nature centers, green spaces, and our wider community.
